I. Introduction

This guide includes a concise collection of topics for the management of content created with SEBLOD 2.x on Joomla 2.x. It is addressed to English-speaking users, from professionals to their clients. It was created with the aim of addressing the needs of developers and designers who have taken on a web application project using SEBLOD 2.x.

A site created by a professional developer or client must focus on content management in the centralized manager of articles and categories within Joomla.

II. Access the content manager

The management of content created via Seblod is directly accessible by the "Article Manager" of Joomla. Instead of "Article Management" we'll refer to "Content management" instead.

From the main menu of Joomla, click on "Content" link and then on "Article Manager".

You will know you are in the management area for items when you see the title "Article Manager: Articles" as well as the active tab "Articles".

On the control panel of Joomla, you will also find a shortcut to the Article Manager.

III. Structure of the content manager

Article Manager: Articles

List of contents

Batch process the selected articles

If choosing to copy an article, any other actions selected will be applied to the copied article. Otherwise, all actions are applied to the selected article.

Set Access Level - Keep original Access Levels -

Set Language - Keep original Language -

Select Category for Move/Copy

Select Copy Move

Process Clear

Mass treatment

The content management system includes four main areas:

- Toolbar
- Filter / Search
- List of contents, in tabular form
- Batch processing of content

The "Filter / Search" area is very important to understand as it allows you to filter a lot of content quickly.

IV. List the contents (List)

<input type="checkbox"/>	Title	Status	Featured	Category	Ordering	Access	Created by	Date	Hits	Language	ID
<input type="checkbox"/>	Cours des comptes : 27 Intranet with multi-site platform (Alias: cours-des-comptes-27-intranet-with-multi-site-platform)			Grands comptes	<input type="text" value="7"/>	Public	Super User	2012-03-08	0	All	7
<input type="checkbox"/>	Dassault System (Alias: dassault-system)			Site e-commerce	<input type="text" value="1"/>	Public	Super User	2012-03-08	0	All	9
<input type="checkbox"/>	Introduction (Alias: introduction)			Réalisations	<input type="text" value="1"/>	Public	Super User	2012-03-08	0	All	8
<input type="checkbox"/>	Joomla allied to SEBLOD, combines facility and extreme customization (Alias: joomla-allied-to-seblod-combines-facility-and-extreme-customization)			Page d'accueil	<input type="text" value="4"/>	Public	Super User	2012-03-02	0	All	4
<input type="checkbox"/>	Overview of Octopooos company (Alias: overview-of-octopooos-company)			Général	<input type="text" value="1"/>	Public	Super User	2012-03-05	0	All	1
<input type="checkbox"/>	SEBLOD at French Joomla! Day (Alias: seblod-at-french-joomla-day)			Général	<input type="text" value="2"/>	Public	Super User	2012-03-05	0	All	2
<input checked="" type="checkbox"/>	Training and support (Alias: training-and-support)			Général	<input type="text" value="6"/>	Public	Super User	2012-03-05	0	All	6

Display # 20

Reading individual list item information is very important, and has an easy approach. Move your mouse over a row to highlight the row and so correctly read all data from that row.

The items are listed by default in alphabetical order by title. Each header of a column of the list is clickable to sort the column, alphabetically for text, numerically for numbers, and temporal order for dates.

The column "date" refers to the date the content was created.

a. Shortcuts

- The titles are clickable to change the relevant content. The interface for editing content can either be a native "Joomla" interface or a native "SEBLOD" interface, according to the general configuration of the SEBLOD component as set out by your site provider.
- Aliases (in gray under the title) are clickable and when clicked will result in the content being edited within the native Joomla interface as opposed to the native SEBLOD interface.
- The status of a content item is directly editable from this list, and it's state can be toggled between "Published" and "Unpublished". Clicking on the green icon (Published) will result in the selected item being unpublished. Clicking on the red icon (Unpublished) will result in the selected item being published.
- Click the green icon (published) to unpublish a content item or click on the red icon (unpublish) to publish content.
- To make a content item "Featured" is also possible directly from this list. Click the icon to switch on featured article .

b. « Joomla » Order

The column "order" is useful only when at least two or more content items are using this order on your site. This order is often convenient because you sort manually the content within a category, exactly as you want it. This method is suitable for categories with low content counts (<20).

To enable the Ordering functions, click the "Ordering" column heading.

To save	
Category	Ordering 
General	 <input type="text" value="1"/>
General	  <input type="text" value="2"/>
General	 <input type="text" value="6"/>
Change the order in one step	
Home page	<input type="text" value="4"/>
Large companies	<input type="text" value="7"/>
Enter an order	
Realizations	<input type="text" value="1"/>
Site e-commerce	<input type="text" value="1"/>

The blue buttons change the order in one step, and the "Disk" is clicked to save the new order defined by you. It is also possible to manually enter the order, very convenient in the case of a large number of content.

Caution! This order in the content management system makes sense only in relation to a Joomla category. This is about manually order the contents of a category. It is strongly recommended to filter only the contents of the category concerned before change ordering.

V. Filter / Search content (Filter)

This area offers search features and filters on content. It is in practice necessary to use this feature once your site has more than 20 content items. To reset the search, click the "Clear" button.

Search			The filters					
Filter: <input type="text"/>	<input type="button" value="Search"/>	<input type="button" value="Clear"/>	<input type="button" value="- Select Status -"/>	<input type="button" value="- Select Category -"/>	<input type="button" value="- Select Max Levels -"/>	<input type="button" value="- Select Access -"/>	<input type="button" value="- Select Author -"/>	<input type="button" value="- Select Language -"/>

Caution! If you think that all the contents are not listed, make sure the research is not used and the filters are on their initial value ("Select ...")!

a. Search

Enter characters in the search field and click the "Search" button to start searching through all your content.

The search is case insensitive (upper or lower case will return the same result).

The search is performed only in the titles and aliases.

To search according to the identifier (ID) of content, use the syntax "id:ID number", for example "id:2".

b. Filtrer

Select a value from the drop down list with a filter option to make use of a pre-defined filter condition.

On a multi-language site, the filter "language" is crucial and should be used routinely.

On a "multi-site" (system from SEBLOD must be activated), usually for administrators, to access the filter also filters content by site.

c. Filter by Category: category and max level

It is important to understand that you also have the ability to filter content by category.

The filter "Select Category" must be used in combination with the filter "Select Max levels." "Level" refers to the category level in the tree of categories defined in the category manager. It deals with notions of "parent category" and "subcategory" (or "category child").

<input type="checkbox"/>	Realizations (Alias: realizations)	Level 1	<input checked="" type="checkbox"/>	<input type="text" value="3"/>	Public	All	11
<input type="checkbox"/>	Site e-commerce (Alias: site-e-commerce)	Level 2	<input checked="" type="checkbox"/>	<input type="text" value="1"/>	Public	All	14
<input type="checkbox"/>	Intranet (Alias: intranet)	Level 2	<input checked="" type="checkbox"/>	<input type="text" value="2"/>	Public	All	15
<input type="checkbox"/>	Large companies (Alias: large-companies)	Level 3	<input checked="" type="checkbox"/>	<input type="text" value="1"/>	Public	All	16

In Article Manager, if you select only one category, all content, including those of parent categories, are listed like below:

Filter:		Search	Clear	- Select Status -	Realizations	- Sel
<input type="checkbox"/>	Title	Status	Featured	Category	Orderin	
<input type="checkbox"/>	Cours des comptes : 27 Intranet with multi-site platform (Alias: cours-des-comptes-27-intranet-with-multi-site-platform)	✔	<input type="radio"/>	Large companies		N = 3
<input type="checkbox"/>	Introduction (Alias: introduction)	✔	<input checked="" type="radio"/>	Realizations		N = 1
<input type="checkbox"/>	Dassault System (Alias: dassault-system)	○	<input type="radio"/>	Site e-commerce		N = 2

Display # 20

If you select a max level, only the content in categories which have less than or equal to the selected level are listed.

Examples :

Filter:		Search	Clear	- Select Status -	Realizations	1
<input type="checkbox"/>	Title	Status	Featured	Category	Ordering	Ac
<input type="checkbox"/>	Introduction (Alias: introduction)	✔	<input checked="" type="radio"/>	Realizations	1	

By selecting a level, only the content belonging directly to the category "Achievements" are listed.

Filter:		Search	Clear	- Select Status -	Realizations	2
<input type="checkbox"/>	Title	Status	Featured	Category	Ordering	Ac
<input type="checkbox"/>	Introduction (Alias: introduction)	✔	<input checked="" type="radio"/>	Realizations	1	
<input type="checkbox"/>	Dassault System (Alias: dassault-system)	○	<input type="radio"/>	Site e-commerce	1	

By selecting the Level 2, the content-level categories 1 and 2 are listed.

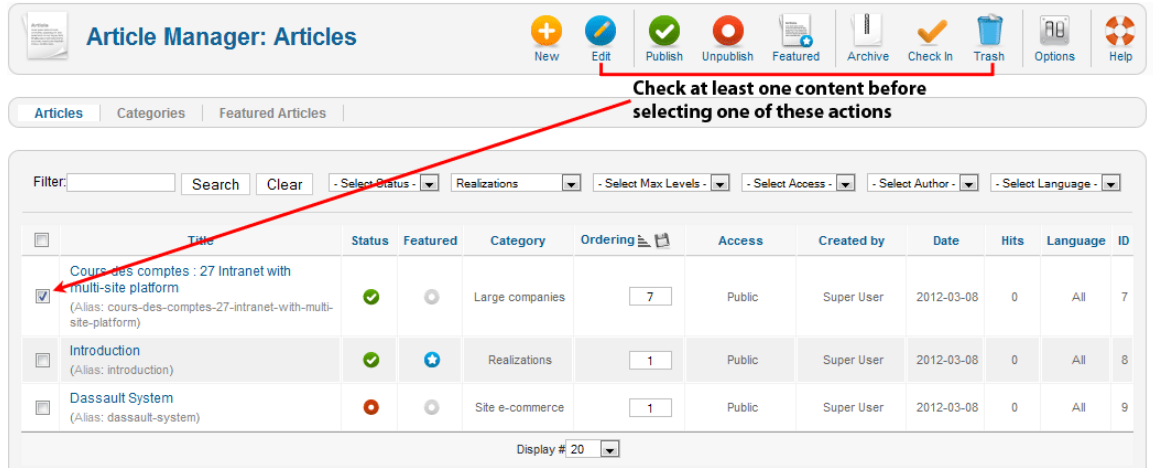

VI. Actions on contents (Toolbar)

The buttons on the toolbar are subject to the permission management of Joomla. Depending on your membership in certain groups of users you grant access to certain

buttons or not. For example, the "Settings" button is reserved for administrators.

The buttons "New", "Settings" and "Help" are directly clickable; others require the selection of at least one content as shown in the image below.

Article Manager: Articles

Articles | Categories | Featured Articles

Filter: Search Clear - Select Status - Realizations - Select Max Levels - Select Access - Select Author - Select Language -

<input type="checkbox"/>	Title	Status	Featured	Category	Ordering	Access	Created by	Date	Hits	Language	ID
<input checked="" type="checkbox"/>	Cours des comptes : 27 Intranet with multi-site platform (Alias: cours-des-comptes-27-intranet-with-multi-site-platform)	✔	⊖	Large companies	7	Public	Super User	2012-03-08	0	All	7
<input type="checkbox"/>	Introduction (Alias: introduction)	✔	+	Realizations	1	Public	Super User	2012-03-08	0	All	8
<input type="checkbox"/>	Dassault System (Alias: dassault-system)	⊖	⊖	Site e-commerce	1	Public	Super User	2012-03-08	0	All	9

Display # 20

The "Edit" button interacts with ONE content item (check one box), while others interact with one or more content(s) simultaneously.

Tip: Check the first box at the table header to automatically check all the boxes on the page, as below.

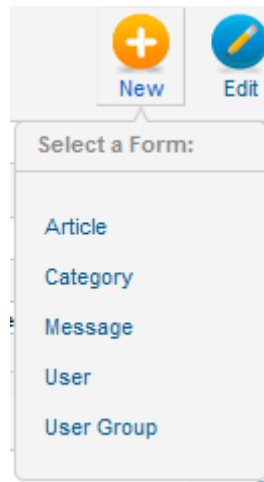

Filter: <input type="text"/> Search Clear - Select Status		
<input checked="" type="checkbox"/>	Title	Status
<input checked="" type="checkbox"/>	Overview of Octopooos company (Alias: overview-of-octopooos-company)	✓
<input checked="" type="checkbox"/>	SEBLOD at French Joomla! Day (Alias: seblod-at-french-joomla-day)	✓
<input checked="" type="checkbox"/>	Training and support (Alias: training-and-support)	✓
<input checked="" type="checkbox"/>	Cours des comptes : 27 Intranet with multi-site platform (Alias: cours-des-comptes-27-intranet-with-multi-site-platform)	✓
<input checked="" type="checkbox"/>	Joomla allied to SEBLOD, combines facility and extreme customization (Alias: joomla-allied-to-seblod-combines-facility-and-extreme-customization)	✓
<input checked="" type="checkbox"/>	Introduction (Alias: introduction)	✓
<input checked="" type="checkbox"/>	Dassault System (Alias: dassault-system)	○

a. Add new content

To add new content, move your mouse over the  button, a list of different content types will appear. Select a content type by clicking it. All types of content appearing here are managed by the SEBLOD component.

Caution! Content Types are subject to the permissions of Joomla!

Clicking on a content type will open up the necessary form, allowing you to fill in the relevant fields and add content of this type to your web site.

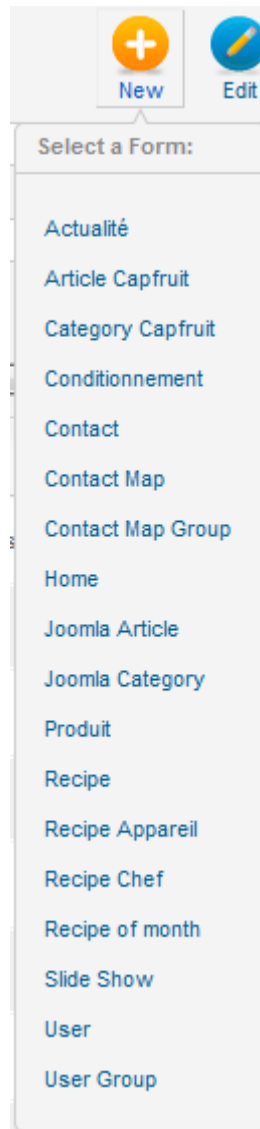

By Default:

- You can create an "Article". This content type is dependent on the Joomla! article manager. It is similar to the Joomla Article content type but is managed by SEBLOD rather than Joomla.
- You can also create a "Category". This content type is dependent on the Joomla! category manager. It is similar to the Joomla category content type but is managed by SEBLOD rather than Joomla.
- Likewise for "Message", "User" (user), and "User Group" (user group), each one has its own content manager that is handled by SEBLOD.

By clicking on the "New" button, you access either the Joomla! Article form or the SEBLOD Article form (as defined in SEBLOD general configuration).

These content types have been created by you or your site provider to meet your exact needs.

Example of a list of types for a web site based on the subject of food:

b. Edit Content

Select one or more content items and click the [Edit](#) button.

To edit content, check the box next to the row of the relevant content item and click the "Edit" button.

You can also edit content directly by clicking on the title of the respective content.

c. Publish Content

Select one or more content items and click on [Publish](#) button.

This will make the selected content viewable on your site.

To publish content, check the box next to the row of the relevant content and click on "Publish" button. You may publish multiple items at the same time by selecting multiple checkboxes next to each row and clicking the publish button.

To publish content faster, identify the line of this content and click on the icon of the "Status" column: .

d. Unpublish Content

Select one or more content items and click on the [Unpublish](#) button.

Unpublished content is no longer visible on your site.

To unpublish content, check the box next to the relevant items row and then click on the "Unpublish" button. Select multiple content items to unpublish all selected content in one go!

To unpublish one content item quickly, identify the line of this content and click on the icon of the "Status" column: .

e. Feature Article (optionnal)

Select one or more content items and click on the [Featured](#) button.

Feature a content is used to highlight content on a specific page of your site. For this criteria to be used you must have lists of content on your site using this criteria. This is often the case on the home page, to display easily and quickly any content specifically marked as "Featured".

f. Archive Content (optionnal)

Select one or more content items and click on the [Archive](#) button.

Archived content is content that is published (ie visible on your site) but only if the archived articles are listed on your site by means of a specific menu item type.

To archive content, check the box next to the relevant row of content and then click on "Archive" button. Select multiple items using the checkboxes to archive all content selected!

g. Unlock Content

Select one or more content items and click on the **Check In** button.

Content is locked when it is being edited by a user, so that another user can not modify it simultaneously. The content must be unlocked in order for another user to modify it.

When the user has finished editing the content, the action of clicking on one of four buttons in this interface, "Save," "Save & Close", "Save & New", "Close" unlocks the content concerned and opens it up for editing by others.

Caution! If the user clicks on one of four buttons to exit editing a content it remains locked, other users can not modify it.

h. Remove Content (Trash)

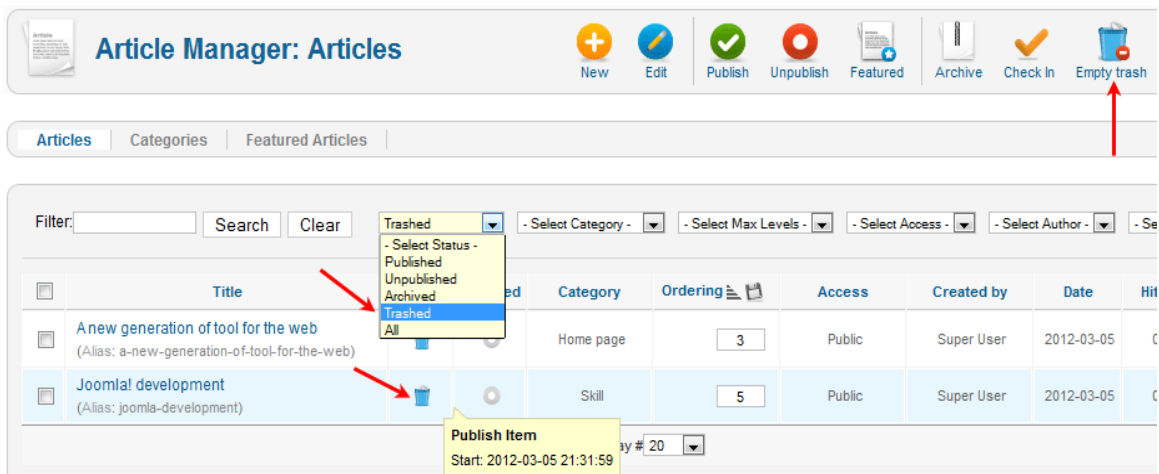

Select one or more content items and click on the **Trash** button.

Content is totally inactive and deleted from the initial Article Manager view, but not permanently deleted from the database. It is in the trash (same concept as on your computer).

i. Management of trash

To republish this trashed content, go to the trash bin by clicking "Select Status" in the filter and selecting the "Trashed" option.

The screenshot shows the 'Article Manager: Articles' interface. At the top, there is a toolbar with buttons for New, Edit, Publish, Unpublish, Featured, Archive, Check In, and Empty trash. Below the toolbar, there are tabs for Articles, Categories, and Featured Articles. The main area contains a table of articles with columns for Title, Category, Ordering, Access, Created by, Date, and Hit. A dropdown menu is open over the 'Select Status' filter, showing options: Trashed, - Select Status -, Published, Unpublished, Archived, Trashed, and All. A red arrow points to the 'Empty trash' button in the toolbar, and another red arrow points to the 'Trashed' option in the dropdown menu. A 'Publish Item' tooltip is visible over the 'Publish' button in the table.

To republish content, click the Trash icon in the "Status" column.

To permanently remove one or more content items from the trash, select one or more of

the items and click the **Empty trash** button.

VII. Batch process the selected articles (Batch)

Other actions are possible on multiple items. These actions are accumulative and can be performed concurrently, ultimately “batch” processing all the selected items based on the criteria selected by the user.

<input checked="" type="checkbox"/>	Joomla allied to SEBLOD, combines facility and extreme customization <small>(Alias: joomla-allied-to-seblod-combines-facility-and-extreme-customization)</small>			Page d'accueil	4	Public	Super User	2012-03-02	0	All	4
<input type="checkbox"/>	Introduction <small>(Alias: introduction)</small>			Realizations	1	Public	Super User	2012-03-08	0	All	8
<input checked="" type="checkbox"/>	Dassault System <small>(Alias: dassault-system)</small>			Site e-commerce	1	Public	Super User	2012-03-08	0	All	9

Display # 20

Batch process the selected articles

If choosing to copy an article, any other actions selected will be applied to the copied article. Otherwise, all actions are applied to the selected article.

Set Access Level - Keep original Access Levels - **Modify the access level**

Set Language - Keep original Language - **Modify the language**

Select Category for Move/Copy

Select Copy **Move to another category**

Process Clear

a. Modify the access level of several content

After checking the box in front of the title of one or more content items, select the new level of access you want to assign to the selected content.

To start processing, click the "Process" button.

b. Change the language of several content

After checking the box in front of the title of one or more content items, select the new language you want to assign to the selected items.

To start processing, click the "Process" button.

c. Move many contents into another category

After checking the box in front of the title of one or more content items, select the new category you want to assign to selected content.

To start processing, click the "Process" button.

Caution! At this point the copy of a content managed by Seblod is not operational. Thank you not to use it!
